Personal Computer Systems

The HP 150 personal computer systems are a series of four products. All four products include many standard features such as HP Touch, a powerful but simple-to-use touch-sensitive display. HP Touch can be used as a pointing device to move the cursor and execute commands. All four systems have in common the same attractive packaging with a small footprint occupying only 2.1 sq. ft. of desk surface.

The base configuration of the HP 150 is a personal computer system without mass storage drives. This system can immediately be used as a terminal and can be upgraded at a later date to a personal computer by simply adding disc drives. The other three systems provide a choice of disc drives with the base system: 528k bytes, 5M bytes, and 14.7M bytes.
